2016 Consumer Confidence Report

	Water System Name:	CAMBRIA COMM	SERVICES DIST	Report Date:	May 2017
--	--------------------	--------------	---------------	--------------	----------

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2016.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alquien que lo entienda bien.

Type of water source(s) in use: According to SWRCB records, this Source is Groundwater. This Assessment was done using the Default Groundwater System Method.

Your water comes from 5 source(s): San Simeon Well 01, San Simeon Well 02, San Simeon Well 03, Santa Rosa Well 03 and Santa Rosa Well 04

and from 4 treated location(s): Santa Rosa 04 & High School We, Santa Rosa Wells 01 & 03 - Fe/, SR3 and SR4

Opportunities for public participation in decisions that affect drinking water quality: Regularly-scheduled water board or city/county council meetings are held at Cambria veterans memorial building 1000 main St Cambria CA every 3rd Thursday of every month at 12:00pm.

For more information about this report, or any questions relating to your drinking water, please call (805)927-6227 and ask for Jason Buhl or visit our website at www.CambriaCSD.org.

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG):

The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level

(MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for the contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for the contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

pCi/L: picocuries per liter (a measure of radiation)

NTU: Nephelometric Turbidity Units

umhos/cm: micro mhos per centimeter

The sources of drinking water: (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides,* that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products if industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resource Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 6, 7, 8 and 9 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

Table 1 - SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA										
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Sources of Contaminant					
Total Coliform Bacteria	1/mo. (2016)	0	no more than 1 positive monthly sample		Naturally present in the environment.					

Table	Table 2 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER								
Lead and Copper (complete if lead or copper detected in last sample set)	Sample Date	90th percentile level detected	No. Sites Exceeding AL	AL	PHG	Typical Sources of Contaminant			
Lead (ppb)	20 (2016)	8.3	1	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers, erosion of natural deposits			
Copper (ppm)	20 (2016)	0.62	0	1.3	.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives			

Table 3 - SAMPLING RESULTS FOR SODIUM AND HARDNESS									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant			
Sodium (ppm)	(2014)	30	20 - 50	none	none	Salt present in the water and is generally naturally occurring			
Hardness (ppm)	(2014)	384	289 - 523	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring			

Table 4 - 1	Table 4 - DETECTION OF CONTAMINANTS WITH A <u>PRIMARY</u> DRINKING WATER STANDARD										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant					
Arsenic (ppb)	(2014)	ND	ND - 2	10	0.004	Erosion of natural deposits; runoff from orchards, glass and electronics production wastes					
Barium (ppm)	(2014)	0.16	0.13 - 0.21	1	2	Discharge from oil drilling wastes and from metal refineries; erosion of natural deposits					
Hexavalent Chromium (ppb)	(2014 - 2016)	ND	ND - 1.4	10	0.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.					
Fluoride (ppm)	(2014)	ND	ND - 0.3	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.					
Nitrate as N (ppm)	(2016)	ND	ND - 0.5	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits					
Nitrate + Nitrite as N (ppm)	(2014)	ND	ND - 0.4	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits					
Gross Alpha (pCi/L)	(2013 - 2016)	1.144	ND - 1.77	15	(0)	Erosion of natural deposits.					

Table 5 - TREA	Table 5 - TREATED DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant				
Hexavalent Chromium (ppb)	(2014)	ND	ND - 1.3	10	0.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.				

Table 6 - DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant				
Chloride (ppm)	(2014)	33	20 - 65	500	n/a	Runoff/leaching from natural deposits; seawater influence				
Specific Conductance (umhos/cm)	(2014)	807	618 - 1110	1600	n/a	Substances that form ions when in water; seawater influence				
Sulfate (ppm)	(2014)	77.2	48.2 - 128	500	n/a	Runoff/leaching from natural deposits; industrial wastes				
Total Dissolved Solids (ppm)	(2014)	488	360 - 690	1000	n/a	Runoff/leaching from natural deposits				
Turbidity (NTU)	(2014)	0.3	ND - 1.1	5	n/a	Soil runoff				

Table 7 - TREATED DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Constituent Sample Date Level Detected		Range of Detections	Range of MCL		Typical Sources of Contaminant			
Iron (ppb)	(2015)	ND	ND - 130	300		Leaching from natural deposits; Industrial wastes			

Table 8 - DETECTION OF UNREGULATED CONTAMINANTS										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Typical Sources of Contaminant					
Boron (ppm)	(2014)	0.2	0.2 - 0.3	1	The babies of some pregnant women who drink water containing boron in excess of the notification level may have an increased risk of developmental effects, based on studies in laboratory animals.					

Table 9 - DETECTION OF DISINFECTANT/DISINFECTANT BYPRODUCT RULE										
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL (MRDL)	PHG (MCLG)	Violation	Typical Sources of Contaminant			
Total Trihalomethanes (TTHMs) (ppb)	(2016)	68.7	36.3 - 68.7	80	n/a		By-product of drinking water disinfection			
Haloacetic Acids (five) (ppb)	(2016)	33	11 - 33	60	n/a		By-product of drinking water disinfection			

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts if some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with the service lines and home plumbing. *Cambria CSD-DW* is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/lead.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

About our Lead: Infants and children who drink water containing lead in excess of the action level may experience delays in their physical or mental development. Children may show slight deficits in attention span and learning abilities. Adults who drink this water over many years may develop kidney problems or high blood pressure.

2016 Consumer Confidence Report

Drinking Water Assessment Information

A source water assessment was conducted for the SAN SIMEON WELLS 01, 02, and 03 of the CAMBRIA COMM SERVICES DIST water system in April, 2003. A source water assessment was conducted for the SANTA ROSA WELL 04 of the CAMBRIA COMM SERVICES DIST water system in May, 2003. The CCSD is in the process of having a source water assessment done for SANTA ROSA WELL 03.

Discussion of Vulnerability

The activities to which the San Simeon Wells 01, 02, and 03 are most vulnerable include the existence; Other Animal Operations. Crops, irrigated & non-irrigated. Fertilizer, Pesticide/herbicide Application. surface water □ streams. agricultural drainage. artificial recharge projects-spreading basins. The activities to which the Santa Rosa Well 04 is most vulnerable include the existence; Crops, Irrigated. Agricultural Drainage. Wells - Agricultural/irrigation. Septic Systems. Parking Lots, Wells - water supply. Historic Gas stations. Known Contaminant Plumes. No contaminants associated with the above activities have been detected in the groundwater and CCSD continues a regular monitoring program.

Acquiring Information

A copy of the complete assessment may be viewed at: DHS Drinking Water Field Operations Branch 1180 Eugenia Place Suite 200 Carpenteria, CA 93013

You may request a summary of the assessment be sent to you by contacting: Kurt Souza District Engineer 805 566 1326
